# Group Management

Automate what you can to save time, Delegate what you can't to enhance security

Efficient group management forms the backbone of infrastructure and data security. Groups must be kept compliant with the right memberships and permissions to reduce human errors and increase productivity. Netwrix GroupID is an essential tool for businesses aiming to increase productivity and enhance security by simplifying group management within Active Directory & Microsoft Entra ID (formerly Azure AD).

INCREASE PRODUCTIVITY

GroupID's automation ensures swift and accurate management of group memberships and lifecycles from creation to expiration. This reduces human errors and enhances IT productivity.

ENHANCE SECURITY

GroupID delegates access control of sensitive groups or resources. This empowers resource owners or managers to prevent the creation of overly privileged groups.

CUSTOMER FEEDBACK

"It was critical that customized packages be distributed to various groups as they required different levels of detail. With GroupID, we were able to customize this in 15 minutes. What would have been a many-day project in the past, was so simple"

Office of Attorney General's IT Section

Automate what you can to save time,
Delegate what you can't to enhance security

| KEY FEATURES

AUTOMATE GROUP MEMBERSHIPS

Automate group management across directories by creating a query which makes groups sensitive to changes in user attributes within directory.

NEST GROUPS INTELLIGENTLY

Simplify the creation of group hierarchies driven by parent-child relations, ensuring that any changes to users' attributes effortlessly reflect impact in aligned tree.

CONTROL ACCESS WITH WORKFLOWS

Delegate group management to resources owners and appoint them as approvers to review any sensitive requests before being reflected in directory.

STREAMLINE TEAMS AND CHANNELS MEMBERSHIPS

Create teams and channels, streamline team membership with dynamic groups, and set team management groups to expire based on project schedules.

REVIEW ENTITLEMENTS

Evaluate and adjust file server and SharePoint entitlements to limit groups to the least privileges

LINK GROUPS ACROSS DIRECTORIES

Reflect the changes in groups across identity stores in near real time without any third-party connector.

ATTEST WITH LIFECYCLE ENFORCEMENT

Delegate group management through a scheduled workflow for attesting to the active status of groups to justify their existence.

ESTABLISH GROUP OWNERSHIPS

Ensure each group has a primary owner, then add temporary or perpetual owners as needed, automatically removing them after a set time.

CREATE AUDIT TRAIL FOR GROUP OBJECT ACTIONS

Stay secure with history tracked for every action performed in GroupID on a group object. Filter records to locate specific events and annotate records for visibility.

ASSIGN TIME BASED MEMBERSHIPS

Assign temporary group roles and memberships for time-limited projects using domain or OU-specific policies with automatic revocation to enhance security and prevent over-privileged groups.

HOW IS NETWRIX GROUPID DIFFERENT?

ONE-STOP GROUP MANAGEMENT

Eliminate the need for switching between applications for group management.

MOBILE APP

Enable users to perform common tasks on their mobile devices such as joining groups, leaving groups, approving workflow requests, and more.

POWER AUTOMATE INTEGRATION

Execute processes seamlessly across platforms by linking a workflow in an identity store to Power Automate flow, triggering the linked flow automatically when workflow activates.

RESTful APIs

Integrate group and user management processes into your applications using APIs.

FIRST-CLASS TECHNICAL SUPPORT

Have your issues promptly resolved by first-class technical support team with a 96% satisfaction rate.
