

# Netwrix Strongpoint

Improve your security posture and pass any audit

Audit requirements for Salesforce and NetSuite instances are changing — more aspects of the system are being included, and more businesses are being asked to prove that their change control processes are effective.

Setting up your environment to meet these requirements doesn't have to be stressful, expensive, or time-consuming. In fact, with Netwrix Strongpoint, there are just three easy steps:

## CLEAN UP

Identify and safely eliminate technical and access issues for a cleaner, easier-to-manage environment

## MANAGE

Use automation to speed up your change processes, reduce risk and get accurate, audit-ready reports

## CONTROL

Build smart controls around technical and access related issues for a cleaner and safer environment?

## CUSTOMER FEEDBACK

"Strongpoint gives me complete visibility and control of my systems, so I know what's going on... I have full confidence that my environment is safe, happy and healthy."

# Key Features of Netwrix Strongpoint

## GAIN CONFIGURATION INSIGHT

Knowing how your account has been customized can be difficult in a mature instance, or if external consultants have been involved.

## MANAGE CHANGE EFFECTIVELY

Change management is about understanding what you're doing, understanding what the significance is, and ensuring policies are in place to maintain security, compliance, and efficiency.

## ENSURE APPROPRIATE ACCESS

Use pre-defined or customized rules to automate the application of access policies. Minimize the use of privileged roles with appropriate segregation.

## EASILY SPOT DEPENDENCIES

Customizations don't exist in a vacuum — they connect to reports, workflows, scripts, and automation.

## MITIGATE RISK

Without insight and control, changes can introduce new security risks. Reduce that risk by documenting your environment and applying strong change management policies.

## LIGHTEN AUDIT BURDEN

Pass periodic audits fast with pre-built reports showing approved changes, resolved incidents, and remaining unresolved incidents.

## HOW IS NETWRIX STRONGPOINT DIFFERENT?

### SCALABILITY

Netwrix Strongpoint scales to meet the needs of the largest organizations

### LIGHTWEIGHT FOOTPRINT

Low impact, built with system performance in mind

### LOW COST OF OWNERSHIP

Fasttrack manual and time consuming projects with automation and pre-built controls

### FAST TIME TO VALUE

Deploy in weeks not months and start to gain the benefits of better insight and control
